

Conditional access made to complement your Zero Trust strategy.

Your most powerful conditional access management solution that leverages Scalefusion UEM ZTA to safeguard your apps and devices.

Secure every access. Approve only what you trust.

Ensure only the right users gain access, reducing credential misuse and data risk.

Ensure every access to enterprise data is verified, logged, and audit-ready.

Constantly evaluate security risks and adjust access on the spot, so your defenses evolve the moment threats do.

Automate access control and authentication based on the policies you set ensuring secure access with reduced IT workload.

Free your IT team to focus more on security. Reduce routine admin work to prioritize high-value security initiatives.

Keep your corporate resources secure by allowing access to only trusted users on managed, compliant devices.

Context-aware access. “Zero trust” confidence.

Lock access to Scalefusion-managed devices

Restrict access to your business-critical apps and emails to only those devices that are managed by Scalefusion.

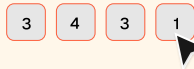

Define browser policy for app access

Enforce specific browsers and minimum browser version to access apps. Enforce browser compliance to avoid security vulnerabilities.

Allow flexible Multi-Factor Authentication

Allow access to work apps on an unmanaged device via Multi-Factor Authentication using a third-party authenticator or OTP received via email.

OTP Based MFA

Verify unmanaged access

If corporate resources need to be accessed from an unmanaged device, require T-OTP from the Scalefusion authenticator app on a managed device.

OTP Verification

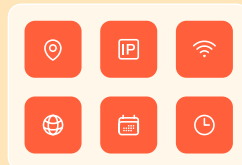

Please enter your code here

Verify

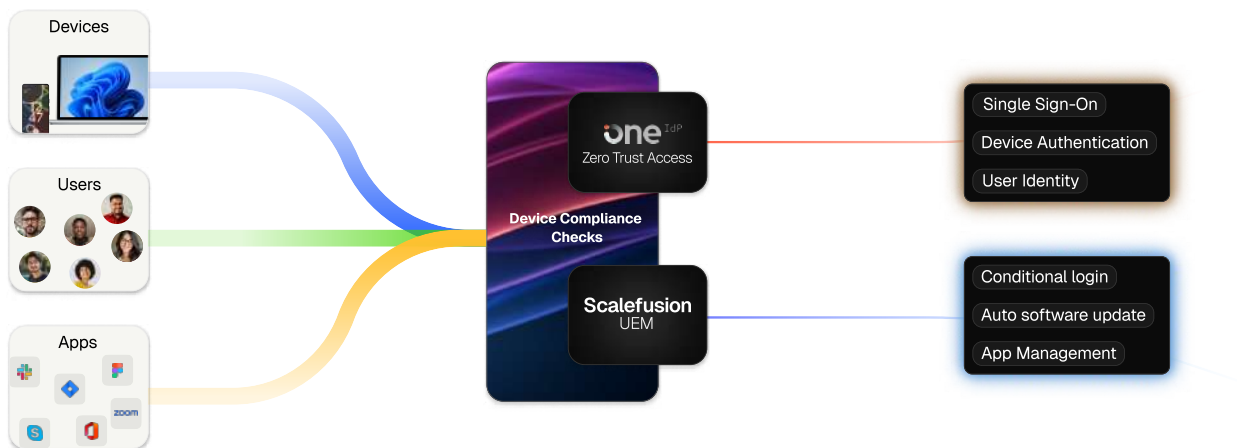

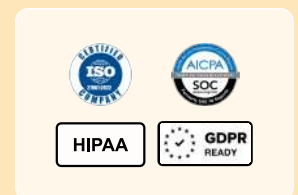

Govern device access with context

Enforce access based on location, IP, Wi-Fi, date, or time to ensure only authorized users on approved conditions get in.

Customize device compliance checks

Evaluate device compliance for logged-in users. Select a frequency to check whether the device is compliant with specified conditions.

Conditional access for a protected, connected enterprise.

Ensure only right users get secure access from the right locations and under the right conditions.
